

# Different Flavours of OS

## Procedure:

In this system by using the VM ware software two virtual machines were created with the specifications of different configurational OS. One is Ubuntu OS with

Memory - 2GB

Processor 2

Hard Disk – 20GB

Network Adapter - NAT.

And the Other virtual Machine is Configured with the windows – 7 OS with Specifications

Memory - 2GB

Processor 2

Hard Disk – 40GB

Network Adapter - NAT.

The necessary storage required for the Ubuntu OS is 20 GB and the Windows is 60GB it leads to the consumption of Maximum storage and processing units of the Physical system. The Physical System Specifications were Storage – 512 GB and Memory – 6GB.

So, the Maximum virtual Machines that will run in the System is **two** Only.
